Mean across 45 benchmarks · CPU PyMatching timing surrogate
d = 3 · QEC round = 1 µs · speculation off · cells show valid benchmark coverage
aligned · α = 0
aligned · s = 1
parallel · α = 0
parallel · s = 1
sliding · α = 0
sliding · s = 1
Isolated speed multiplier, s
Slowdown coefficient, α
Maximum parallel decodes, M
Mean additional idle patch-rounds per benchmark relative to one-round baseline
Each cell averages successful runs only; cutoffs and failures are omitted from the mean. Maximum valid coverage: 45/45 benchmarks.
